## Emkay Expansion Update

Emkay are happy to announce phase one to five of planned expansion works are now complete. Thank You to all customers for waiting patiently on the dispatch of purchase orders.

For those awaiting sanding operation services to commence, the plant has now been commissioned and is now an additional service at Emkay Plastics Ltd. This means we can achieve a +/- 0.2mm tolerance for those orders that must meet this criteria. Please contact us for more information on this service.

With the increased storage space in place, Emkay has the capacity to stock a wider range of ROHACELL® grades than we currently stock. If there is a grade that you order or would like to order which is currently a non-stock item for Emkay, please contact us and we will endeavour to keep stock of this grade once a yearly order forecast has been received. Thank you to all customers who have already sent a yearly order forecast over. If your company hasn't sent a forecast, bear in mind that this will lower your current lead times, therefore allowing you to hold minimal stock and free up company cash flow.

Emkay is continuously working towards fulfilling the increasing customer demands, so therefore we have two more phases before the expansion is complete. Announcement coming soon!

We would like to thank our dear friends at Evonik for appointing Emkay Plastics Ltd as an authorised supplier of Rohacell in the UK.

This has increased our customer base and pushed the team to improve the current business model to benefit the customers in the

## JEC PARIS

Steven King and Leah Sillis visited the JEC Paris this year to have meetings and to see the ever growing composite market! As usual the JEC did not disappoint, filling us with new ideas we will be applying to Emkay in the future!

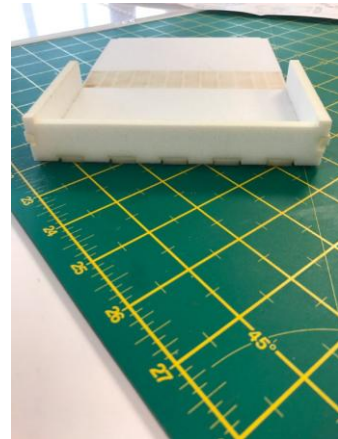

Steve Leah and Evonik

## Rohacell in Schools

Emkay's Rohacell offcuts never goes to waste! We donate these to educational programmes in Norwich. One of our biggest schemes is donating to local schools to aid them in GCSE projects. Steve and Leah recently made a visit to Acle Academy and the University Technical College in Norfolk.

Acle Academy has made good use of Rohacell offcuts for many years now. Steve and Leah were shown around the machinery the children use to machine and of course their finished projects. They were even given the opportunity to produce their own design on the Laser Machine. Unfortunately due to lack of skill we are unable to show you the outcome of Leah's "masterpiece" however we can show you what the children have been making!

Using the Laser machine the children had designed and made projects which we were very impressed with.
