

SHELF LIFE[™]

STORAGE OF ROHACELL®

The shelf life of ROHACELL® PMI foam is unlimited. The foam is UV-stable. However, we recommend storing the material properly packed thus protecting the material against dirt and moisture.

PMI foams can absorb moisture during storage in a similar manner to other plastics and material, e.g. wood.

The mechanism of moisture absorption is a diffusion process and thus the amount of moisture pick-up is a function of humidity, temperature and time.

We recommend storage at low humidity level, preferably in a temperature and humidity (75°F (23°C) and a < 50% r.h.) controlled environment.

We also recommend to recording storage conditions. Storage in moisture proof bags MIL-B-131 or bags equivalent, prevent the material from absorbing moisture.
